

SPONSORSHIP BROCHURE

2026-2027

UNIVERSITY OF
ILLINOIS
URBANA-CHAMPAIGN

Our Mission

*Building a car **entirely from scratch.***

EV Concept is a team of interdisciplinary engineers dedicated to advancing electric vehicle technology. We research, design and manufacture our own vehicles from scratch for various competitions, most notably being the Shell-Eco Marathon.

Our subteams use SolidWorks, KiCAD, and other engineering softwares to design, manufacture and operate the car. We focus on mentoring new members through practical implementation. Each member gains hands-on experience that shapes their engineering career and can choose projects to specialize in, allowing for a deeper understanding of key components and increased responsibility within the team.

*Our current goal is to complete **10 miles** of **continuous running** with **minimal energy burn.***

Our History

Founded in 2012, **Illini EV Concept** was established by a few friends wanting to challenge their limits in engineering and STEM. Since then, our team has grown from its humble beginnings to an organization dedicated to having a lasting impact on generations of students and our local community.

Illini EV Concept believes in the abilities of **every** individual member. We reward **determination and consistency**, encouraging members to not just start projects, but finish with a product that *challenges* their engineering expertise. The engineering mentality of constant *iteration*, *problem solving*, and *innovation* are fundamental tenants of our organization. We provide both new and experienced members with the opportunity to learn industry leading skills while putting their prowess towards a final product **we can all be proud of**.

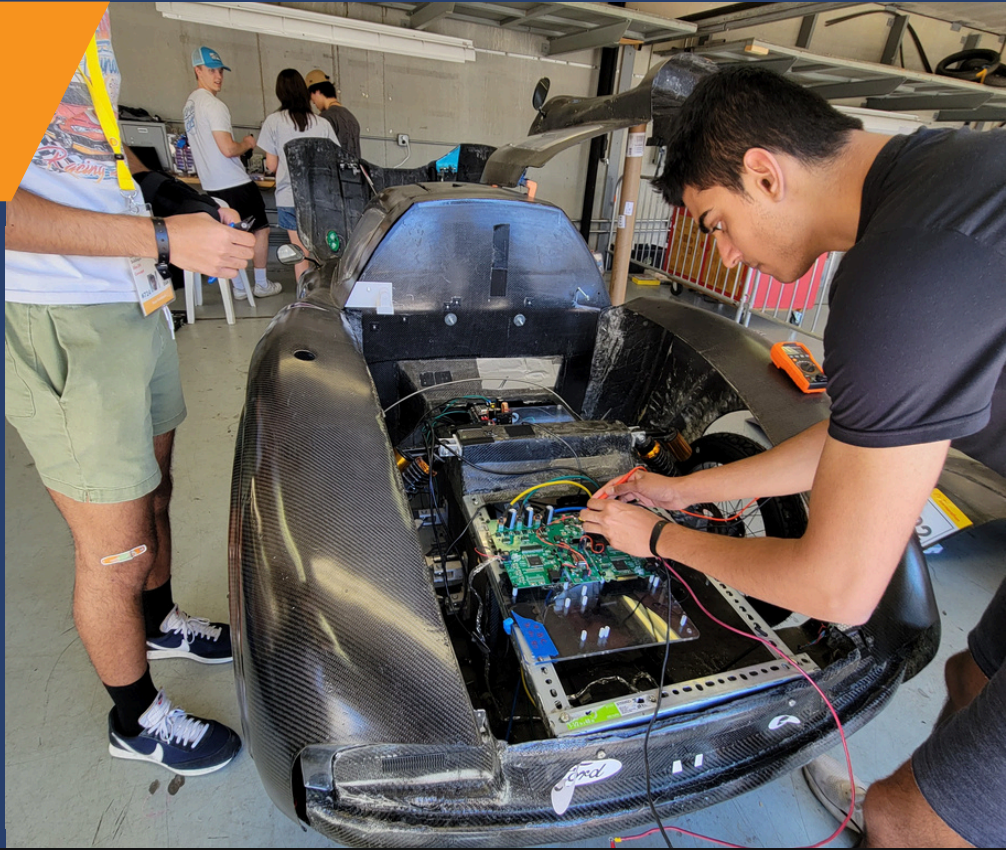

Meet Our Teams

Electrical/ Embedded

Designs, assembles, and integrates all electrical systems within the car. This involves the end-to-end development and manufacturing of critical components, including battery management systems, telemetry boards, and motor controllers.

Mechanical/ Composites

Creates high-quality mechanical and body components to ensure vehicle safety and performance, including the design and manufacturing of the car body, drivetrain, suspension, brakes, and steering mechanisms.

Meet Our Teams

Autonomous

Develops comprehensive systems necessary for autonomous vehicle capabilities, focusing on computer vision for object and lane detection, advanced planning algorithms, and the integration of specialized hardware to enable seamless autonomous operation.

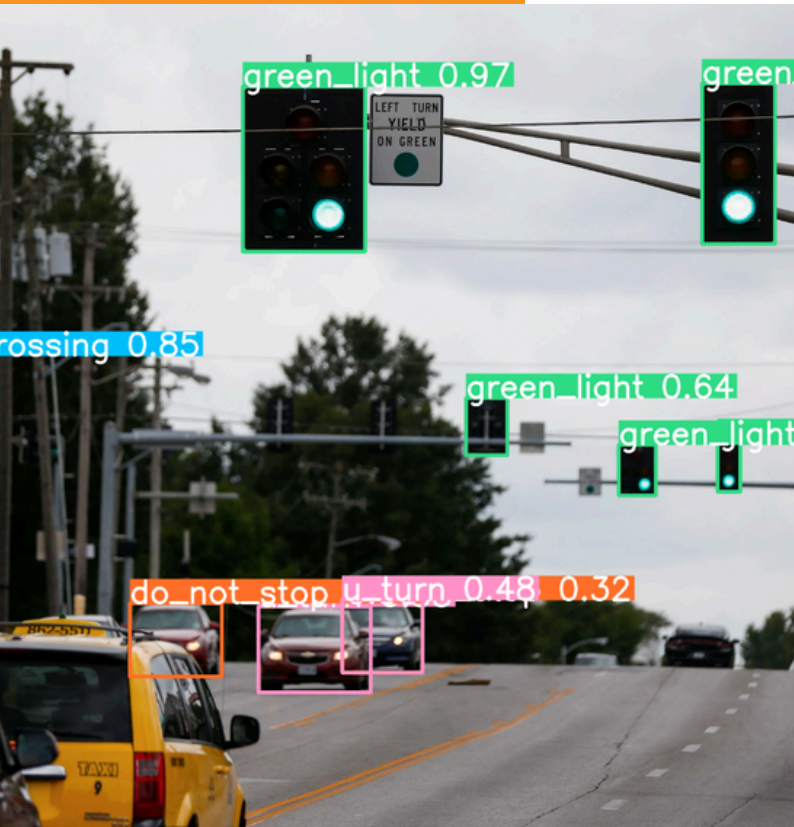

Business Operations

Innovates within the team by addressing essential but often less visible organizational needs, such as internal consulting, inventory management, purchases, sponsorship arrangements, accounting, and outreach efforts.

Sample Our Other Projects

Autonomous Perception

One of our most defining and ambitious projects revolves around advancing our autonomous capabilities. Our dedicated autonomous team utilizes the PyTorch framework, YOLOv8 model, and OpenCV library to power our object and lane detection systems, enabling real-time awareness in autonomous driving. Once the system processes data about the vehicle's surroundings, our planning team steps in, using the Robot Operating System (ROS) and its navigation stack to carefully calculate the safest and most efficient path for traversal. .

Active Battery Management System (BMS)

Innovation isn't limited to software projects, and our battery is a prime example. Not only did we design and build our own battery, but we also developed an advanced management system that actively monitors each cell for safety and automatic balancing during both passive and charging states. Beyond tracking charge, our BMS also monitors battery health and temperature, using algorithms to optimize balancing and charging strategies in real time.

Why Sponsor?

Invest in the Community

EV Concept has recently begun making change in the community, reaching out to local high schools and encouraging students to explore STEM for the future while teaching them important principles in protecting the environment today. We hope that by showing younger students what is possible when a group of engineers come together, we can help inspire the next generation of problem solvers.

Contribute to a Greener Future

EV Concept seeks to become a beacon of sustainability and environmental preservation for the University of Illinois in the future. Become an ally by supporting a group of driven students looking to change the world for the better.

Media Reach

EV Concepts participates in competitions with an international reach as well as outreach events within our community. A sponsorship would mean your name and logo on our merch and car with a local and global audience.

Direct Recruitments

Approximately 95% of our members graduate to work at companies specializing in technology and engineering, utilizing the skills they learned in EV Concept each day. Through sponsorships, companies gain exclusive access to an elite group of engineers already trained in the critical thinking and skills needed to tackle today's biggest challenges.

Benefit Levels

BENEFIT	BRONZE \$250-\$499	SILVER \$500-\$999	GOLD \$1000-\$4999	ORANGE & BLUE \$5000+
Name and Logo on Website	✓	✓	✓	✓
Logo Placement on Merchandise & Car	✓	✓	✓	✓
Resume Book Access	✓	✓	✓	✓
Social Media Story	✓	✓	✓	✓
Social Media Post	✓	✓	✓	✓
Distribution of Recruitment Materials	✓	✓	✓	✓
Informational/Recruitment Event	✓	✓	✓	✓
Technical Workshop	✓	✓	✓	✓
Premiere Logo Placement on Car	✓	✓	✓	✓

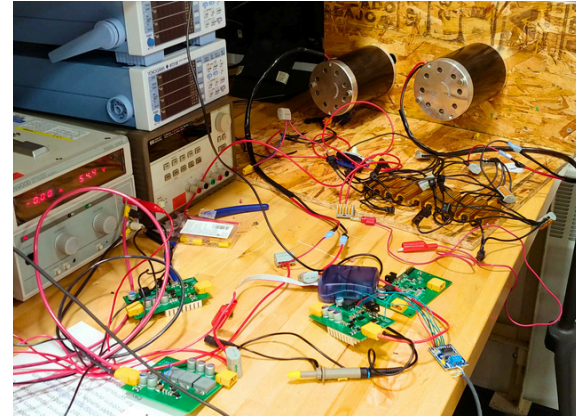

Bronze

Name and Logo on Website

To show our gratitude for your support, your company name and logo will be featured on the Sponsors page of the EV Concept website, along with a direct link to your company's website, offering added visibility and recognition.

Logo on Merch & Car

We will place your logo on our official merch! Additionally, we'll put your logo on our car that we send to the Shell-Eco Marathon.

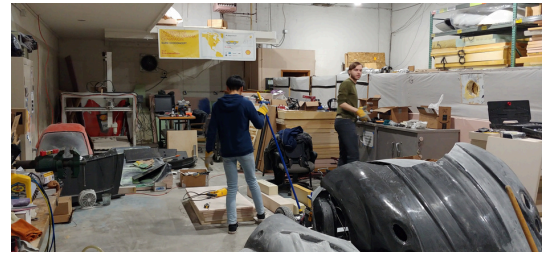

Silver

Sponsors receive all Bronze level benefits as well as:

Social Media Story

We will broadcast your support on our social media, giving a shoutout on our Instagram's Story page.

Resume Book Access

At EV Concept, we have an exceptionally skilled talent pool. Our members receive training in fundamental skills along with hands-on, real-world experience, working on projects that adhere to industry standards in equipment, methods, and protocols. Sponsoring us would provide access to these students' contact information and expertise through our annually compiled resume book.

Gold

Sponsors receive all Silver level benefits as well as:

Social Media Post

With the gold tier, you will get a higher boost on our social media via a permanent post on our Instagram and LinkedIn.

Distribution of Recruitment Materials

We will distribute your company's recruitment materials to all team members and provide updates on important deadlines to submit applications for job postings that you wish to advertise.

Gold

Informational/Recruitment Event

We will host an information or recruitment event with your organization. You'll be able to connect with our members and bring awareness of your organization and the opportunities available.

We will handle logistics and advertising to ensure strong attendance, and offer media coverage along with a copy of the collected materials.

Technical Workshop

You'll also have the opportunity to host a technical workshop that goes beyond just recruitment. We will help organize an event that will utilize your organization's products with our team. We're also open to other event suggestions for this benefit, depending on your organization's focus.

Orange & Blue

Sponsors receive all Gold level benefits as well as:

Premier Logo Placement

Your logo will be prominently featured on our merchandise, website, and car, including prime locations like the front and sides of the car. This strategic placement ensures maximum visibility and exposure for your company.
